Problem1: Polynomial Regression_ writeup

Estimated Functions:

$$\hat{y}_1(x) = 52.1581x - 189.866$$

$$\hat{y}_2(x) = 7.00158x^2 + 9.30386x - 239.334$$

$$\hat{y}_3(x) = 0.820138x^3 + 0.271767x^2 - 0.0103221x - 175.277$$

$$\hat{y}_4(x) = 0.00598796x^4 + 0.755218x^3 + 0.234560x^2 + 1.17636x - 175.880$$

$$\hat{y}_5(x) = 0.000853138x^5 - 0.0046982x^4 + 0.752812x^3 + 0.526091x^2 + 0.965906x - 176.837$$

The data seems to best follow a third order polynomial (line) which can be seen from the lowest error between the estimated regression function $\hat{y}_3(x)$, and the data in the plot above.
